# FSG's Approach to Cybersecurity

In a world that's built on technology, nothing is more important than security.

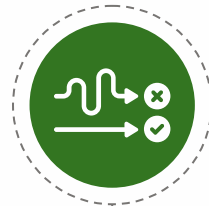

As threats continue to evolve, so should your cybersecurity strategy. Together, we can proactively defend your organization against cyber risks.

FSG is proud to offer our **Cybersecurity expertise designed to solve your most difficult security challenges.**

## Security Assessments/Ransomware Resilience

We provide a comprehensive approach to evaluating and analyzing your security posture by assessing vulnerabilities, risks and potential threats to identify weaknesses and determine the effectiveness of existing security measures.

## Objective Security Technology Validations

We focus on evaluating and validating the effectiveness, reliability and sustainability of a security technology solution by providing an objective and rigorous assessment of the security solution's capabilities, performance, and potential impact.

## Executive Leadership/Fractional CISO

We effectively implement security strategies and plans within an organization to achieve desired outcomes by translating vision and ideas into actionable steps, aligning resources, motivating teams, and driving the execution of initiatives to produce tangible results.

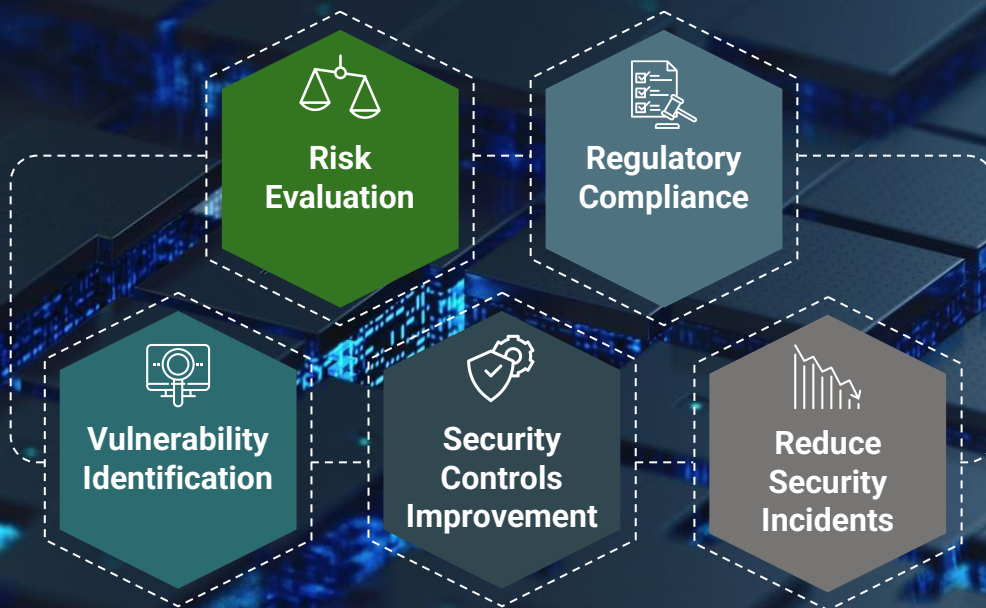

# Cybersecurity Program Assessments

Understanding your risk begins with knowing where your program measures up to established standards and controls. We focus on evaluating and analyzing the organization's security posture by assessing vulnerabilities, risks and potential threats to identify weaknesses and determine the effectiveness of existing security measures.

## Security Assessment Outcomes

# Ransomware Resilience

## Prevention

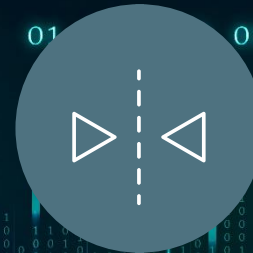

## Detection

## Response

## Backup & Recovery

## Continuous Improvement

**Ransomware attacks are on the rise and only projected to increase in frequency in the coming years. Our ransomware resilience program evaluates and validates an organization's ability to effectively prevent, detect, respond to, and recover from ransomware attacks. We help organizations employ strategies, technologies, and practices to mitigate the risks and minimize the impact of such attacks.**

# Objective Security Technology Assessment & Validation

**Evaluation:** We assess the security technology objectively by analyzing its technical specifications, functionality, and performance in real-world scenarios. This evaluation helps determine the strengths, weaknesses, and limitations of the solution.

**Validation:** We work to validate the claims made by the solution vendor. By conducting independent tests and experiments, we can verify whether the solution meets its intended objectives and performs as advertised.

**Risk Assessment:** We help identify and evaluate potential risks and challenges associated with implementing and adopting the solution. This includes assessing security vulnerabilities, ethical considerations, legal implications, and potential negative impacts on various stakeholders.

**Decision-Making Support:** The findings and recommendations can assist decision-makers, such as executive leadership, security leaders and business unit leaders, in making informed choices regarding the adoption, deployment, or investment in the solution.

**Trust and Credibility:** An independent and objective validation enhances the trustworthiness and credibility of the solution being assessed. Our transparent evaluation process and unbiased assessment help build confidence in the solution's capabilities and potential.

# Security Execution Leadership

## Clear Direction

We establish a clear and compelling security vision, set goals, and communicate them effectively to the teams.

## Planning and Organizing

Our security leaders provide strong execution skills to develop detailed implementation plans, identify potential risks and obstacles, and create contingency strategies to address them.

## Accountability

We establish clear performance expectations, set measurable targets, and regularly track progress.

## Decision Making

Our security execution leadership involves making informed and timely decisions.

## Communication & Collaboration

We foster open and transparent communication channels, ensuring that information flows smoothly across all levels of the organization.

## Problem Solving

Our execution leaders are skilled problem solvers who can identify root causes, generate creative solutions, and make informed decisions to overcome hurdles.

## Adaptability

We anticipate changes, respond quickly to unforeseen circumstances, and adjust plans as needed.

## Motivation & Empowerment

Our security leaders excel at execution and understand the importance of motivating and empowering their teams.

# Fractional Chief Information Security Officer

By leveraging the expertise of a fractional CISO, organizations can access the knowledge and guidance of an experienced cybersecurity professional without the cost associated with a full-time executive. This arrangement allows organizations to benefit from strategic cybersecurity leadership while maintaining flexibility and cost-effectiveness.
